Physica 37 (1989) 564
North-Holland, Amsterdam

ANALYTIC SUBJECT INDEX

Acoustic scattering 508
Autocorrelation function 200

Betchov model 200
Bifurcation 334
Binary fluid 295, 319, 341, 359
Boundary layer 1, 11, 20

Chaotic advection 423
Chapman–Enskog 42
Coherent structure 1, 11, 173
Collisionless plasma 206
Complex Ginzburg–Landau equation 315
Constrained decimation 160, 200
Convection 288, 295, 300, 319, 334, 341, 359
Correlation dimension 153
Coupled-map lattice 33, 60
Cross-helicity 215

Defects 33
Density-stratified fluid 384
Differential equations 83
Direct interaction approximation 160
Dynamical system 1

Eddy diffusion 542
Ergodicity 173

Flicker noise 60
Fractal dimension 104

Ginzburg–Landau equation 91, 126

Hamiltonian dynamics 497
Heteroclinic cycle 1, 20
Homogeneous turbulence 173
Hopf bifurcation 315

Incompressible flow 490
Interfacial instability 248
Intermittency 20, 60, 91
Intermittent transition 153

Jupiter 515

k–e diffusive transport 227

Kuramoto–Sivashinsky equation 109

Lagrangian turbulence 423
Lattice gas 42
Linear vector fields 83

Magneto-fluid 173
Mass transport 341
Measurement technique 508
MHD turbulence 215
Minimum energy-dissipation rate 215
Modal reduction 126
Multiphase turbulence experiment 270

Navier–Stokes 42, 116, 146, 417, 453, 474
Noise 20
Nonlinear waves 300
Numerical algorithms 146
Numerical simulations 116, 315

Obstacles 441
Ocean waves 104
Oscillatory instability 295, 300

Pattern selection 60
Phase portraits 83
Phase-space turbulence 206
Pipe flow experiment 153

Quadrupole 485

Rayleigh–Bénard convection 126, 288
Reconnection 490, 555
Relaxation process 215
Reversed-field pinch 215

Self-diffusion 192
Self-organization 206
Shear flow 406, 515
Shock waves 248, 264
Sidewall conductivity 288
Similarity solution 463
Simulations 270, 531, 555
Singular behavior 463
Singular spatially-periodic solutions 531
Soap film 384, 406
Soliton 485
Soliton turbulence 60
Spatial intermittency 542
Spatial patterns 334, 341
Spatiotemporal chaos 60, 91, 109
Spatiotemporal intermittency 33
Spatiotemporal patterns 295, 300, 319, 359
Spectral method 453
Spectral simulation 417
Statistical properties 109
Stochastic driving 192
Subgrid models 192
Symbolic manipulations 417

Temporal complexity 116
3D simulation 474, 490
Time series 104
Transport 485
Traveling waves 288, 295, 319, 341, 359
Turbulence 1, 11, 20, 33, 160, 200, 206, 248, 384, 406, 453, 515
Turbulent mixing 227
Two-phase flow 264
2D and 3D simulations 453
2D Euler equations 531
2D Euler flows 497
2D hydrodynamics 384, 406
2D numerical simulation 227
2D simulation 264
2D turbulence 417

Ultrasound 508

Variational principle 441
Vortex boundaries 441
Vortex decay 542
Vortex dynamics 515
Vortex entangling 555
Vortex filament 485
Vortex flow 441
Vortex patches 497
Vortex reconnection 474
Vortex sheet 463
Vortex sound 485
Vortex sound generation 423
Vortex tubes 490
Vortices 515

Wavenumber selection 334

Physica 37 (1989) 564
North-Holland, Amsterdam
